"I think he has come in and done a great job," he told City's official website. "He's been a great signing. He's done his job, we've had some great games with him up front, and I think he's going to be a great addition to the team. "We play good football, but we don't do it as well as we can in the last five minutes of games. We can be top of the table or in trouble and then you need a guy up front who can score and create something for you. "He's not the tallest guy. Before: Markup checker, from AutoCAD's Tools menu, has been a major feature for years. It can be used for checking the accuracy of your drawings or as a quick way to see details that may be overlooked. To make sure your drawing is accurate, simply select any part of the drawing and click Markup Checker. It checks for consistency, including border lines, text and dimensions, gridlines, footprints, dimensions, and curves. If any of these features appear out of order or have gaps, it helps you to find those errors. Example of a finished drawing, with errors circled in red. After: To check your drawing, choose Markup Checker from the AutoCAD Tools menu. Click Make Corrections, and then click Yes to save the corrections to your drawing or Yes to immediately draw them. The next time you open your drawing, the errors will be corrected automatically. To check the selected object in different viewports or to review previously selected objects, choose View menu > Print. To see the markups before the changes, choose Markup Preview. You can check only the selected object in the drawing by choosing View menu > Print Preview. The markups appear in the active viewport. Use the Zoom tool to help you read the lines. You can also click the Zoom toolbar button and choose Fit to see the drawing at a larger size. Revisions with Markup: If you edit your drawing before you import feedback, you can return to the last version of the drawing and create a new revision from that version. That revision will automatically include any change you make in your drawing without having to redo the drawing. (video: 1:31 min.) To create a revision, do the following: To open a previous revision of a drawing, select File > Open Drawing. To open a revision of a drawing created by others, select File > Revisions > Select Previous Revision. To create a new revision, do the following: Select File > New Revision. Select the version of the drawing you want to create a new revision from. If you want to create a new revision of the most recent version, you can select File > Revisions > New or Current Revision. The revision is saved to your current project. Outlining tools: Click the Outliner button on the Standard toolbar or select Home tab > Outliner
