I am making a program that has a 2d array and I would like to print it in a method. However I am having trouble making the method take a generic object and store it into the 2d array. I have created an abstract class "Board" to store the data for the 2d array. I have made a method in the abstract class called "printBoard" which I want to pass the object to. The errors I am getting are: Board cannot be used as a type parameter because it is an abstract type. and Variable player.move must be initialized I have been using this site to see if I have done the right thing. This is my code: import java.util.Scanner; import java.util
